ABOUT LUDUS: Ludus is a game studio of an indie-developer based in Seoul, Korea. Ludus is an international game studio composed of multinational and multicultural experts to develop games with the utmost attention to detail, delivered with excellent quality. Ludus is focused on the creation of quality games with a long run-time. Contact: six-speed automatic transmission of a vehicle has a hydraulic circuit system which is hydraulically connected to a torque converter and a torque converter clutch, and performs a gear shifting action between speed ratios of the transmission by regulating a torque input from a prime mover to the automatic transmission by means of a plurality of frictional engagement elements (clutch, brake, gear, etc.) arranged between the automatic transmission and the torque converter. There is a need to improve fuel consumption of the vehicle by enhancing an efficiency of the torque converter, and various technologies for this purpose have been proposed. In a conventional hydraulic circuit system for automatic transmission having a torque converter, oil is allowed to flow via a direct oil path from a torque converter bypass passage (speed reduction circuit path) which bypasses a fluid path between the torque converter and the transmission via a locking pressure path. In this case, the amount of oil flowing via the direct oil path is not significant, and the prime mover is not overloaded when the gear shifting is performed. Therefore, it is possible to prevent the prime mover from being overloaded. When oil is allowed to flow via the direct oil path, however, the efficiency of the torque converter is decreased, so that the prime mover may be overloaded when the gear shifting is performed. Therefore, it is required to control the amount of oil flowing via the direct oil path in order to improve the fuel consumption of the vehicle. In JP-A-2001-343743, the amount of oil flowing via the direct oil path is controlled in such a manner that the amount of oil flowing via the direct oil path becomes smaller than the amount of oil flowing via the bypass passage so as to reduce the amount of oil flowing via the direct oil path when the hydraulic pressure supplied to the direct oil path becomes less than a predetermined pressure by detecting the hydraulic pressure supplied to the direct

(1) Battle. [Enemy Appearance] (a) Battle fields • Random Map • Various maps • Seasonalized map • Dungeons • Random Map • Various maps • Seasonalized map • Dungeons (b) Enemy AI The large number of arms in the enemy AI, including custom appearances, skill in varying degrees, and special attacks, gives you a choice to deal with different enemy formations and strategies. (2) Skill Strengthening. • Skill Strengthening A move is an action that raises a skill. You can assign a skill to each action, and use the skill to cause the action you choose. Strengthening is as effective as the skill, meaning that the number of points to strengthen decreases as the level of the skill increases. A character that has already mastered his skills will have a stronger pull for higher-level skills. • Progress Tracking All character skills begin with 1 skill point. At the beginning of each battle, the points for all skills will add up. If you equip all the skills that make up your skill list, your points will change. Equipped skills subtract points from a total sum of points, and the system calculates the sum and adds the points for the skills that give you the most points. If you are using a character that does not have any equipped skills, then all your skills start with 1 skill point. The four major skills are • Strength • Perception • Magic • Presence Strengthen with strength to make your attacks stronger. Strengthen with perception to make your attacks and spells better. Strengthen with magic to make your attacks and spells stronger. Strengthen with presence to make your attacks and spells stronger. • Buff Resistance All statistics except defense decrease while your HP is low. To use a buff, use an ability during battle to heal HP. This will increase the HP of your character by 1. There are three types of buff. Fixed Stats Equip points to increase one stat. • STR: 3 to 5 • WIS: 2 to 4 • CON: 1 to 3 Increases the effect of the stat. • STR: +1 • WIS: +1 • CON: +1 Expand Equip points to recover 1/3

What's new in Elden Ring:

While many video games recently have begun to leave such things behind, I'm happy to see an influential game choose this path and take such steps to set itself apart as something that can cater to more casual play. I'd like to see more games make a similar move, not only in terms of the LFG community but also in general, because these kinds of communities (in many genres) can do a lot for game communities.

So, games in the works? At this point I don't know. But I do know that I'll be keeping an eye on this development and following their progress closely.
